Widget **Factory!**

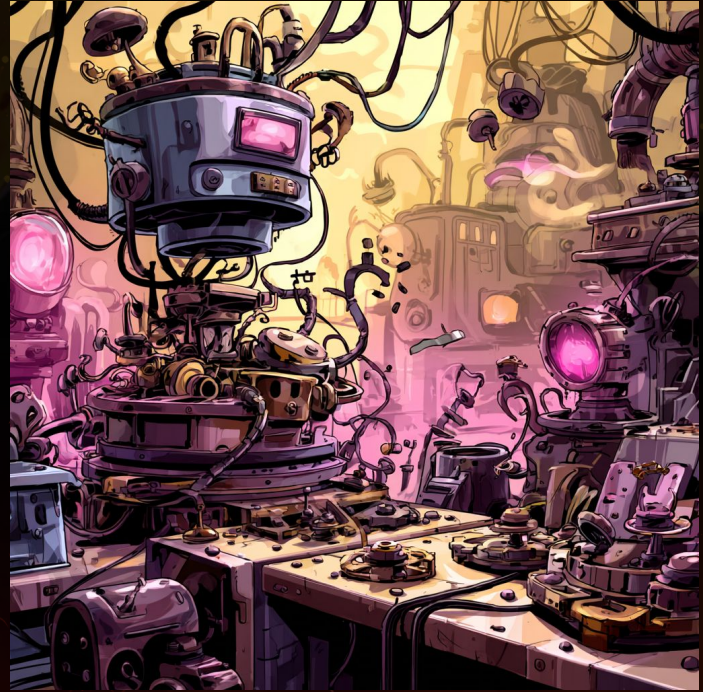

Automatically create BCH
widgets in seconds

<https://github.com/widgetcash/factory>

The Story of Widget Factory

The BCH BLAZE team were making slides for project presentations and suddenly it hit us! What if people's widgets could be produced in a factory instead of by hand?

Bob suggested his garage as our workshop & it went from there. We're amazed by the quantity of widgets we can produce now!

Benefits of Widget Factory

- **Create widgets in seconds**
 - Everyone needs widgets
 - Widgets are fun
- **Never lose your widget maker - ever again!**
- **Automatically back up good widget designs**
 - 10x less frustration with missing widgets!

Layla Example

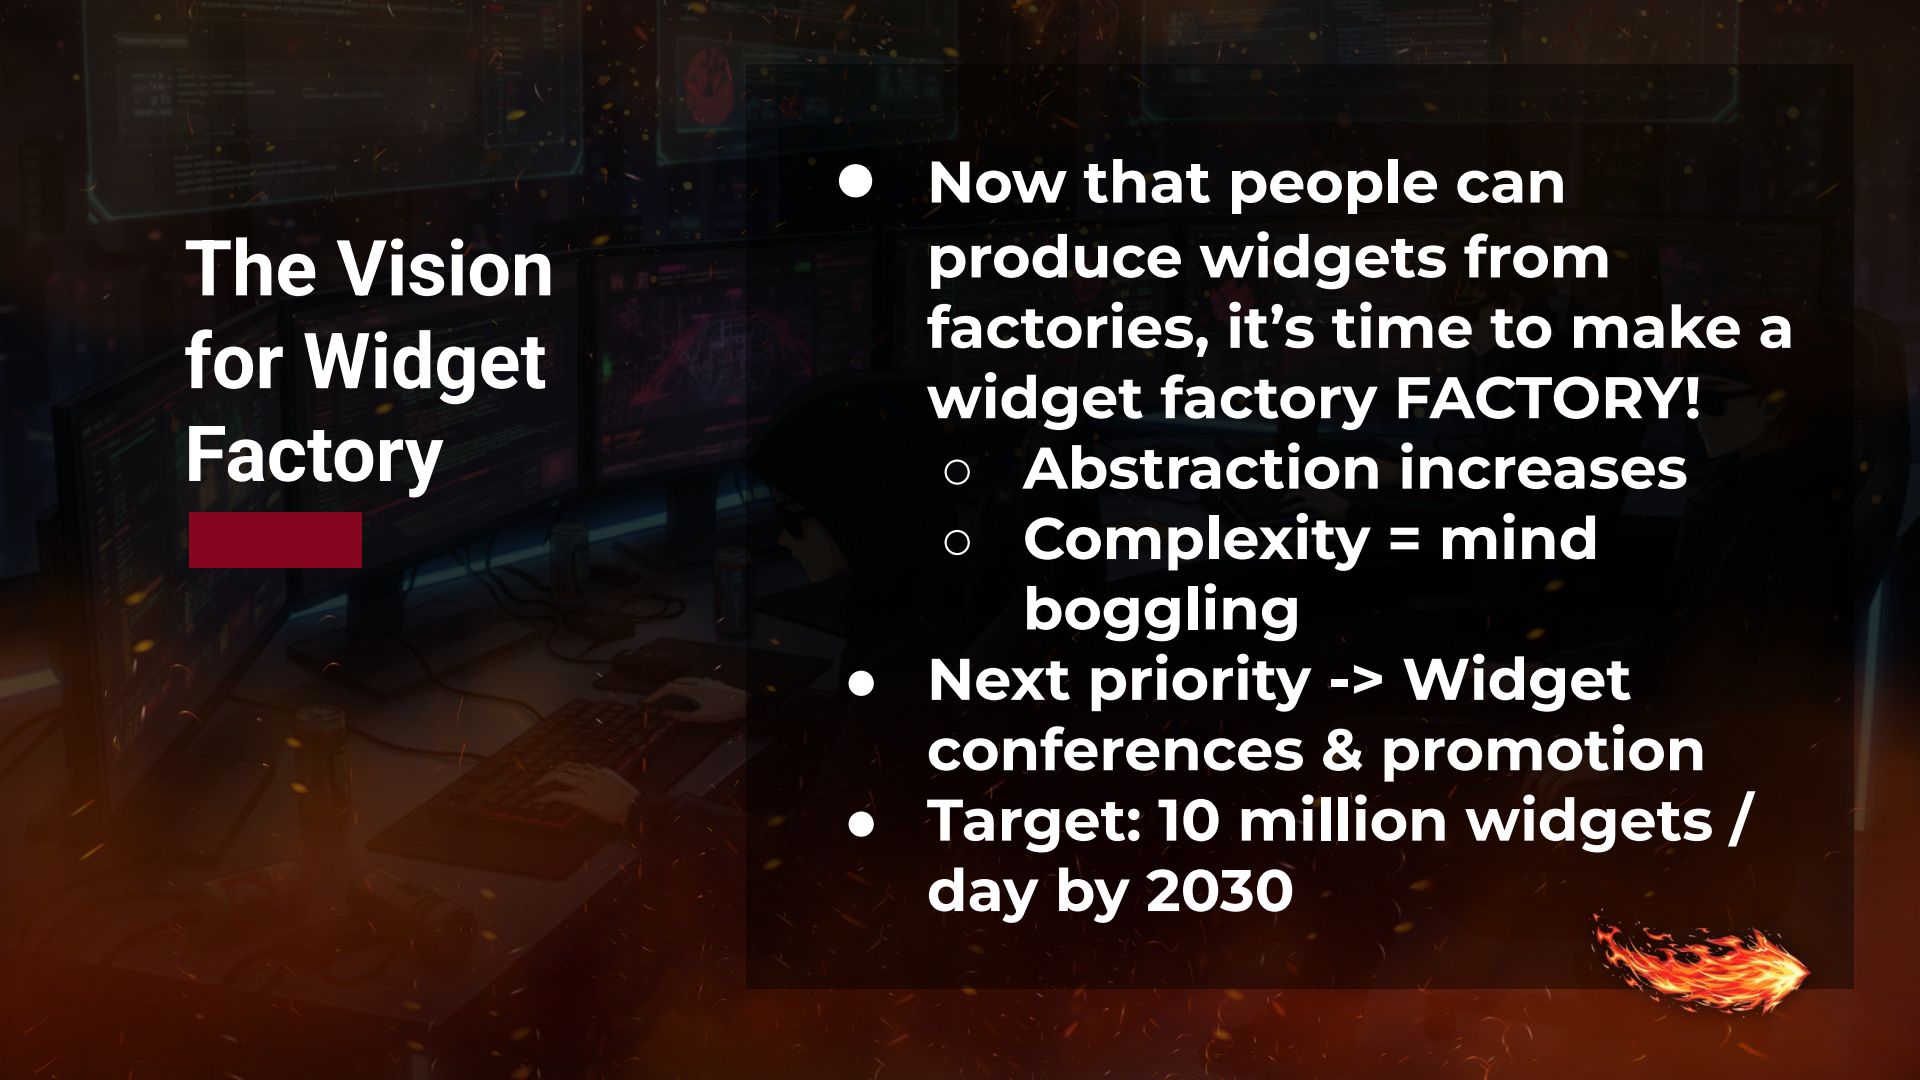

Loops was used to increase efficiency of factories
(Delete if no examples e.g. for mainnet track)

```
pragma cashscript ^0.13.0;

contract NoTokensAllowed() {
    function spend() {
        int inputIndex = 0;

        // Loop over all inputs (variable length), and make sure that none of them contain tokens
        do {
            require(tx.inputs[inputIndex].tokenCategory == 0x);
            inputIndex = inputIndex + 1;
        } while (inputIndex < tx.inputs.length);
    }
}
```

The Vision for Widget Factory

- Now that people can produce widgets from factories, it's time to make a widget factory **FACTORY!**
 - Abstraction increases
 - Complexity = mind boggling
- Next priority -> Widget conferences & promotion
- Target: 10 million widgets / day by 2030

THANK YOU!
